Procedure/Program:

Step 1: Update Ubuntu and Install Required Packages

1. Update the package repository:
sudo apt update && sudo apt upgrade -y

2. Install security tools:
sudo apt install snort suricata nmap nikto hydra apache2 -y

3. Enable Apache web server:
sudo systemctl start apache2
sudo systemctl enable apache2

Part 1: Configuring Intrusion Detection Systems (IDS)

Step 2: Configure Snort IDS

1. Verify Snort Installation:
snort -V

2. Edit Snort Configuration File:
sudo nano /etc/snort/snort.conf
Set the HOME_NET to match your network:
ipvar HOME_NET 10.10.10.0/24

preprocessor sfportscan: proto { all } scan_type { all } sense_level { low }
output alert_fast: /var/log/snort/alert

3. Run Snort in IDS Mode:
sudo snort -A console -c /etc/snort/snort.conf -i eth0
(eth0: interface name, check ifconfig for the interface name and IP address)

```
4057 Snort rules read
    3383 detection rules
    0 decoder rules
    0 preprocessor rules
3383 Option Chains linked into 949 Chain Headers

```

Part 2: Performing Vulnerability Analysis

Step 3: Scan for Open Ports Using Nmap

1. Identify the Target IP Address:

   ip a

2. Run Nmap Scan:

   nmap -sV -p- 10.10.10.6 (Check for your system IP address here)

Step 4: Web Vulnerability Scan Using Nikto

1. Run Nikto Scan:

nikto -h http://10.10.10.6 (Check for your system IP address here)

Part 3: Performing Vulnerability Analysis

Step 5: Simulate Port Scanning Attack

1. Run an aggressive Nmap scan:
   nmap -A 10.10.10.6 (Check for your system IP address here)

2. Check Snort Logs:
   sudo cat /var/log/snort/alert

```
atharv@atharv:~$ ps aux | grep snort
snort      53020  0.0  0.9 200652 153920 ?       Ssl  09:26   0:00 /usr/sbin/snort -m 027 -D -d -l /var/log/snort -u snort -g snort --pid-path /run/snort/ -c /etc/snort/snort.conf -S "HOME_NET=[192.168.0.

atharv@atharv:~$ sudo cat /var/log/snort/alert
cat: /var/log/snort/alert: No such file or directory
atharv@atharv:~$
```

Step 6: Simulate Port Scanning Attack

1. Run Hydra Brute-Force Attack on SSH:
hydra -L users.txt -P passwords.txt ssh://10.10.10.6

(Please create the user.txt and passwords.txt file by using mkdir command then Add some sample user as “test” and password as “toor” on the 10.10.10.6 system. Perform this attack from another VM like Kali Linux with ip as 10.10.10.4. Please remember all the IPs given may vary from system to system)

2. Check Snort Rules:
sudo nano /etc/snort/snort.conf
include $RULE_PATH/local.rules (Look for this line in the configuration file)
sudo nano /etc/snort/rules/local.rules (Edit this file)

alert tcp any any -> $HOME_NET any (msg:"Port scan detected"; flags:S; threshold: type threshold, track by_src, count 10, seconds 60; sid:1000001; rev:1;)

alert tcp any any -> $HOME_NET 22 (msg:"SSH brute force attack detected"; flow:to_server,established; detection_filter:track by_src, count 5, seconds 30;

sid:1000002; rev:1;)
(Add these 2 rules in the local.rules file)

3. Check Snort Logs:
sudo cat /var/log/snort/alert

```
[DATA] max 4 tasks per 1 server, overall 4 tasks, 9 login tries (l:3/p:3), ~3 tries per task
[DATA] attacking ssh://192.168.0.0:22/

atharv@atharv:~/Documents/IS$
```

Part 4: Intrusion Analysis and Prevention

Step 7: Analyze IDS Logs

1. View Snort Alerts:

sudo tail -f /var/log/snort/alert

```
atharv@atharv:~/Documents/IS$ sudo tail -f /var/log/snort/alert
03/26-10:11:50.226882  [**] [1:527:8] BAD-TRAFFIC same SRC/DST [**] [Classification: Potentially Bad Traffic] [Priority: 2] {UDP} 0.0.0.0:68 -> 255.255.255.255:67
03/26-10:11:50.678604  [**] [1:527:8] BAD-TRAFFIC same SRC/DST [**] [Classification: Potentially Bad Traffic] [Priority: 2] {IPV6-ICMP} :: -> ff02::1:ff49:62bb
03/26-10:12:31.598159  [**] [1:527:8] BAD-TRAFFIC same SRC/DST [**] [Classification: Potentially Bad Traffic] [Priority: 2] {IPV6-ICMP} :: -> ff02::1:ffd7:f8e7
03/26-10:12:31.599387  [**] [1:527:8] BAD-TRAFFIC same SRC/DST [**] [Classification: Potentially Bad Traffic] [Priority: 2] {IPV6-ICMP} :: -> ff02::16
03/26-10:12:31.816478  [**] [1:527:8] BAD-TRAFFIC same SRC/DST [**] [Classification: Potentially Bad Traffic] [Priority: 2] {IPV6-ICMP} :: -> ff02::16
03/26-10:12:32.725350  [**] [1:527:8] BAD-TRAFFIC same SRC/DST [**] [Classification: Potentially Bad Traffic] [Priority: 2] {IPV6-ICMP} :: -> ff02::1:ff5c:c4db
03/26-10:12:33.723483  [**] [1:527:8] BAD-TRAFFIC same SRC/DST [**] [Classification: Potentially Bad Traffic] [Priority: 2] {UDP} 0.0.0.0:68 -> 255.255.255.255:67
03/26-10:13:26.297169  [**] [1:527:8] BAD-TRAFFIC same SRC/DST [**] [Classification: Potentially Bad Traffic] [Priority: 2] {UDP} 0.0.0.0:68 -> 255.255.255.255:67
03/26-10:13:26.669833  [**] [1:527:8] BAD-TRAFFIC same SRC/DST [**] [Classification: Potentially Bad Traffic] [Priority: 2] {IPV6-ICMP} :: -> ff02::1:ff32:ad4
03/26-10:17:42.584096  [**] [1:527:8] BAD-TRAFFIC same SRC/DST [**] [Classification: Potentially Bad Traffic] [Priority: 2] {IPV6-ICMP} :: -> ff02::1:ff16:c89e
^C
atharv@atharv:~/Documents/IS$
```

Step 8: Mitigate Vulnerabilities

1. Block Attacker's IP Address:

sudo ufw deny from 10.10.10.4

2. Harden SSH Configuration:

sudo nano /etc/ssh/sshd_config (Please change the following in the file

PermitRootLogin no AllowUsers test

3. Restart SSH:

sudo systemctl restart ssh

```
atharv@atharv:~/Documents/IS$ sudo ufw deny from 192.168.0.0
Skipping adding existing rule
atharv@atharv:~/Documents/IS$ sudo nano /etc/ssh/sshd_config
atharv@atharv:~/Documents/IS$ sudo systemctl restart ssh
atharv@atharv:~/Documents/IS$
```
